UK ADVISING AND TUTORING

WHO ARE UKAT?

UKAT is a collection of multidisciplinary academic and support professionals dedicated to transforming tutorial and advisory practices so that every higher education student can experience inclusiveness, well-being and personal growth. Effective tutoring is fundamental to the personalisation of learning and all aspects of student success. We support the development of staff and students throughout the learning journey by sharing resources, practising scholarly inquiry, promoting partnership, fostering community, and espousing excellence in personal tutoring and academic advising practice.

UKAT promotes student success by advancing the scholarship and practice of personal tutoring and academic advising in the UK and beyond. We provide opportunities for professional development, research support, networking, and leadership for our diverse membership.

UKAT membership is open to all higher education institutions from around the world.

PROFESSIONAL DEVELOPMENT

Our professional development offerings currently include

- 2-day annual conference
- Free monthly webinars delivered by sector experts
- International travel bursaries and study trips
- Special Interest Groups

Our activities are underpinned by the UKAT Professional Framework for Advising and Tutoring, a professional competency framework which defines the competencies that those involved in personal tutoring and academic advising in higher education should possess. We will soon be launching a professional recognition and accreditation scheme based on this framework which will be available across the sector and will recognise excellence in advising practice and leadership. Member institutions will be eligible to run their own accreditation recognition programmes.

IMPACT

We are supporting efforts to build the evidence base which demonstrates the impact that personal tutoring/academic advising have on student success. Our research mentoring programme enables members, regardless of their job role or research experience, to receive help and support in taking a research idea from inception, through the design and implementation of robust study to publication of the outcomes. This is complemented by a range of publications such as a special edition of *Frontiers in Education* focused on advising and tutoring in higher education.
